Sat, 16 Feb 2019 02:04:00 GMT Antenna Systems Information - Repeater Builder - In radio engineering, an antenna is the interface between radio waves propagating through space and electric currents moving in metal conductors, used with a transmitter or receiver. In transmission, a radio transmitter supplies an electric current to the antenna's terminals, and the antenna radiates the energy from the current as electromagnetic waves (radio waves). Wed, 20 Feb 2019 08:55:00 GMT Antenna (radio) - Wikipedia - Characteristics. The J-pole antenna is an end-fed omnidirectional half-wave antenna that is matched to the feedline by a quarter wave parallel transmission line stub of Lecher system form. Matching to the feed-line is achieved by sliding the connection of the feedline

back and forth along the stub until an impedance match is obtained. Being a half-wave antenna, it provides a small gain over a ... Thu, 21 Feb 2019 00:33:00 GMT 101 Electronics Links - www.101science.com - I use an old favorite multiband antenna on forty and eighty meters - the center-fed inverted V dipole, fed with true open wire feedline -sometimes known as "tuned feeders".Nothing new about this, except it seems to have been forgotten by many. One rule-of-thumb with antennas is that one which is optimized for one band, is superior to a multiband antenna, all other things being equal.
