Pacini â€ \*Department of Biological Sciences, Napier University, Edinburgh, and Sun, 17 Mar 2019 16:46:00 GMT The Structure and Function of Nucleic Acids - Nucleic acids are the biopolymers, or small biomolecules, essential to all known forms of life. The term nucleic acid is the overall name for DNA and RNA. They are composed of nucleotides, which are the monomers made of three components: a 5-carbon sugar, a phosphate group and a nitrogenous base. If the sugar is a compound ribose, the polymer is RNA (ribonucleic acid); if the sugar is derived ... Wed, 20 Mar 2019 02:24:00 GMT Nucleic acid - Wikipedia - The four main classes of molecules in biochemistry (often called biomolecules) are carbohydrates, lipids, proteins, and nucleic acids. Many biological molecules are polymers: in this terminology, monomers are relatively small micromolecules that are linked together to create large macromolecules known as polymers. When monomers are linked together to synthesize a biological polymer, they ... Wed, 20 Mar 2019 21:58:00 GMT Biochemistry - Wikipedia -
