The surfactants used to coat the nanoparticles include, but are not limited to: . oleic acid; tetramethylammonium hydroxide; citric acid; soy lecithin; These surfactants prevent the nanoparticles from clumping together, ensuring that the particles do not form aggregates that become too heavy to be held in suspension by Brownian motion. usually refers to inorganic materials. Ultrafine particles are the same as nanoparticles and between 1 and 100 nm in size, as opposed to fine particles are sized between 100 and 2,500 nm, and coarse particles cover a range between 2,500 and 10,000 nm.
